

Gymnic 12 Inch Physio-Roll Ball, Blue

This 12 Inch Sportime Physio Roll Ball is designed for limited-movement forward and backward rotation to improve both balance and stability. A contoured saddle is situated midway between large outrigger balls that provide a high degree of control and stability while holding the rider in place. While it may give the appearance of being glued together, this therapy ball is rotationally molded in one seam-free piece for durability and to prevent leaks. It is versatile in design and can be used standing up for a young child to hug or placed in a pool where it becomes a sea horse. A single valve lets you inflate the ball with a standard electric ball pump or compressor.
